

Important new information about Covid-19 vaccines and face masks on children

August 5, 2021

My purpose in writing this paper is to ensure that you the reader have the most recent scientific information regarding Covid-19 vaccinations and having children wear face masks. Regarding the vaccine. U.S. Senator Ron Johnson from Wisconsin recently reported that 84% of the new Covid-19 infections in Israel are in persons who have been vaccinated. Since 84% of the Israeli population has been vaccinated, this means the vaccine is having no effect in reducing the incidence of Covid-19 infections. Many other countries are now experiencing a similar phenomenon. (YouTube suspended Senator Ron Johnson's account for releasing this information.)

More importantly, Dr. Robert Malone, the person who invented mRNA vaccines, has determined, **based on new scientific findings, that the vaccines actually make vaccinated persons more vulnerable to the virus.** <https://www.thegatewaypundit.com/2021/07/inventor-mrna-vaccine-covid-vaccines-make-virus-dangerous/> (Dr. Malone is one of the world's leading authorities on the Covid-19 vaccine.)

Specifically, Dr. Malone said, "This is precisely what one would see if antibody-dependent enhancement was happening." Meaning "the vaccine causes the virus to become more infectious than the absence of vaccine." He also said this "is our worst nightmare," and the "worst case scenario" in terms of outcomes in the use of Covid-19 vaccines. (Some medical researchers are also warning that the vaccines may cause blood clots, sterility, and may also damage a person's immune system.)

What is the solution? According to Dr. Malone, we must stop vaccinating people and instead make use of effective treatments, such as hydroxychloroquine and ivermectin. **This means we should neither require nor encourage anyone to take Covid-19 vaccinations.**

The medical community has long recognized that Covid-19 vaccines could make people more susceptible to the disease, not less. The National Library of Medicine reported :

"COVID-19 vaccines designed to elicit neutralizing antibodies may sensitize vaccine recipients to more severe disease than if they were not vaccinated."

<https://pubmed.ncbi.nlm.nih.gov/33113270/>

The National Library of Medicine also reported, in the linked article above, on a study which evaluated whether the Covid-19 research subjects were informed of this danger that the vaccine could make them more susceptible to the virus, not less). This report states that "medical ethics standards of informed consent" require that this information be given. The study concluded, however, that the **research subjects were not given this information**, and for this reason they could not give informed consent to their participation.

This article adds that medical ethics requires that both research subjects and recipients of the vaccine be given information about the dangers of the shot. The study concluded, however, that these requirements are not being met. This means **that both the studies and the giving of the vaccines are being done in violation of accepted standards of medical ethics.**

How about the issue of face masks for children? Numerous studies have determined that face masks are ineffective in preventing the transmission of Covid-1. On June 30, 2021, the Journal of the American Medical Association (JAMA) published the results of a scientific study done in Poland on the consequences of mask use by children. (JAMA is one of two most respected medical journals in our country.) The study measured the carbon dioxide in side face masks worn by children. The study concluded:

Within just three minutes, the level of carbon dioxide present in the air being breathed in by school children wearing masks is six times higher than the legal limit.

Based on this information, the study stated:

We suggest decision-makers weigh the hard evidence produced by these experimental measurements accordingly which suggest that children should not be forced to wear face masks.

<https://jamanetwork.com/journals/jamapediatrics/fullarticle/2781743>

Not surprisingly, there have been numerous reports of adults and children experiencing dizziness and loss of consciousness as a result of wearing masks. But the key point, as stated in this study, is we now know that “children should not be forced to wear face masks.”

It is significant that JAMA was pressured into retracting this—making it crystal clear that **our citizens are being prevented from hearing the truth** about the Covid-19 virus, the vaccines, and face masks.

You won't easily find accurate information on these matters in the mainstream media because it does not fit their destructive narrative. Information is being suppressed. Consider, for example, the vicious attacks on hydroxychloroquine and ivermectin by Dr. Fauci and others, drugs which are now acknowledged to be highly effective Covid-19 treatments. These drugs can reduce fatalities and serious illnesses by two-thirds. Fauci and his associates sent many thousands of people to their deaths by their false attacks on these effective therapies.

We are all conscience-bound to share this information with friends, families and associates. At this time many employers are notifying their employees they must take the shot or lose their jobs. Many schools are mandating the shot for students, administrators, faculty, and staff. People are being forced to make difficult and deeply troubling decisions for the health, safety and long-term welfare of themselves and their families. Everyone needs to know the truth now more than ever.

On August 5, 2021, the U.S. Surgeon General, Vivek Murthy, announced that during the coming school-year he expected approval for giving the vaccine to school-age children, and Pfizer said it was testing the vaccine on children as young as six months (*Epoch Times*, August 5, 2021). We can see where this is headed.
