

Serious Questions about the Rush to Inject Children

It has been said the truth can handle a few questions.

Child Protection League has many serious questions about the rush to inject children between the ages of 5-11 with experimental mRNA 'vaccines' for which there is no long-term safety data. None.

Question #1: Since when did the 'let's just do it' approach become the new gold standard for measuring, tracking and assessing long-term safety?

[Eric Rubin](#) was part of the FDA Advisory board which voted to approve administering the shots to children ages 5-11. He acknowledged that the decision was *"a much tougher one, I think, than we had expected coming into it,"* adding that *"we're never going to learn about how safe this vaccine is unless we start giving it."* If children experience serious long term or debilitating side effects or even death the damage will already have been done.

Question #2: Why do Moderna, Pfizer and Johnson & Johnson have complete and full immunity for any injuries or deaths caused by their Covid shots which have only been approved under an Emergency Use Authorization (EUA)?

They are completely exempted from ALL legal responsibility for injuries to children that will occur from this 'let's just do it' and 'see what happens' decision by the FDA. [Immunity from Liability \(PREP\)](#)

Question #3: Will the FDA be held responsible for any injuries or deaths?

"The PREP Act also created the [Countermeasures Injury Compensation Program \(CICP\)](#), which provides benefits to people who claim that they suffered injuries from vaccines under emergency authorization;" however, "people who make claims about injuries or allergic reactions to either of the COVID-19 vaccines have less time to make their petitions than people who have filed claims for injuries from vaccines related to the measles or the flu. They also are less likely to receive compensation for injuries from COVID-19 vaccines, and if they do receive compensation, it likely will be a smaller amount."

Question #4 Are all children at risk from Covid?

According to data from the CDC and the Minnesota Department of Health (MDH) the answer is a resounding NO. According to the MDH for children ages 0-19, the death rate outcome due to covid is a mere .0000262%. **The CDC's own data finds that children ages zero to twenty have a 99.997% survival rate for COVID 19.** Clearly, healthy children are NOT at serious risk or death from Covid 19. Also see our [CPL briefing paper](#) regarding the masking of children.

Question #5 Do children spread Covid?

Again, the answer is a resounding NO. Senior Director of Infection Prevention and Control Patsy Stinchfield from Children's Minnesota and an adviser to the CDC on vaccines indicated the same during an [MPR interview](#). She stated, ***"Well, it's very, very small for kids to be positive" and that "severe COVID in children does happen, but it is very rare."*** If children are rarely positive, then it would logically follow they would rarely transmit the virus to others.

Question #6 – Do the shots pose greater risks to children than the virus itself?

The answer to this question reveals a stunning lack of scientific curiosity about what is being reported through the [Vaccine Adverse Event Reporting System \(VAERS\)](#), a system where those reporting are under penalty of felony for submitting a false report. One very serious condition being reported but simultaneously suppressed is Myocarditis. Myocarditis — the inflammation of the myocardium of the heart— can manifest as chest pain, heart failure, or sudden death.

*“Myocarditis is a significant risk for cardiac death among the young and is the third leading cause of sudden cardiac death in children and young adults from puberty through the early 30s. The study confirms that myocarditis rates reported to VAERS were significantly higher in individuals between 13 to 23 years of age, with around 80% occurring in males. Additionally, of the 12- to 15-year-old age group, within eight weeks of the FDA May 10, 2021 EUA of the Pfizer jab, the experts found **19 times the expected number of myocarditis cases.**”*

Incredibly, this [peer reviewed study](#) has been ‘temporarily removed,’ VAERS is also reporting a multitude of serious side-effects, permanent disabilities and death among adults and children. VAERS has been used for decades to report vaccine injury events from all vaccines. Since the Covid 19 injections began, VAERS has compiled astronomical numbers of injuries and deaths. To date there are almost 18,000 deaths and 800,000 serious injuries recorded in the system AND historically, VAERS captures less than 10% of actual events. Most go unreported. So the real number of deaths and injuries is likely significantly higher.

Eleven doctors have [blown the whistle](#) calling out the FDA and the CDC for ignoring this data. Multiple whistleblowers under penalty of perjury have provided U.S. Attorney Thomas Rentz [raw data](#) from the Centers for Medicare and Medicaid Services (CMS) database documenting 47,465 deaths within 14 days of receiving a Covid shot...most occurred within 3 days. His lawsuit is going forward.

[Dr. Peter McCullough](#), one of America’s most prestigious and frequently cited physicians in his prodigious career, has bravely been speaking out about the danger of the Covid shots, and the rising injury and death tolls since early February when his patients started returning to his practice with serious injuries from the shots. Other ‘new’ vaccine programs were stopped in their tracks for less than 50 recorded deaths...yet here we are at almost 18,000 deaths and now pushing mandates? Dr. McCullough calls it [medical malfeasance](#).

Question #7: What is the risk/benefit profile for inoculating children with a formula that has already been proven to fail to protect against infection and transmission of Covid? Are these shots even really vaccines?

The CDC has admitted the shots do not provide complete [protection against reinfection or transmission of the virus](#). Is this why the CDC continues to change the [definition of ‘vaccine’](#) on its website so it fits with the reality of the demonstrable and [waning efficacy](#) of the Covid 19 shots?

Yet, in light of all of these questions and data, on November 5, 2021, Governor Walz was out gaslighting parents with the fake news that 300 kids are “in the hospital who are really sick” and that the vaccines are 91% effective. The Center of the American Experiment called him out using his own [MDH data](#). Many are [questioning this claim of efficacy](#) because whistleblowers have come forward with evidence that Pfizer compromised “*data integrity and patient safety*. A regional director who was employed at the

research organization Ventavia Research Group has told The BMJ that the company falsified data, unblinded patients, employed inadequately trained vaccinators, and was slow to follow up on adverse events reported in Pfizer’s pivotal phase III trials.”

Question #8 – Why has Pfizer reformulated their shot for children?

A [document used](#) during the FDA approval “confirms that Pfizer “*modified the formulation of their injection for children to include an ingredient that reduces the acidity of blood and is used to stabilize people who have suffered a heart attack.*” Was this new formula tested during the initial trials or introduced as a response to all the heart attacks, strokes, myocarditis, and clotting issues being reported with the injections?

Question #9: Why is natural immunity against Covid not considered effective?

It is shocking that natural immunity continues to be questioned or ignored. Natural immunity has always been recognized as far superior in providing durable, long lasting, and often life-long protection.

Question #10: Why are effective early at home treatment protocols being blocked, censored, withheld and dismissed by mainstream media, hospitals and big pharma?

The government has inserted itself between doctors and patients. This is unprecedented. Never before have doctors been fired, censored, or had their medical licenses revoked for prescribing [approved and safe drugs](#) to treat disease. Never before have pharmacies refused to fill prescriptions by certified doctors. The government is deliberately blocking FDA approved, safe medications. What’s going on?

What should you do?

- Be informed. Don’t take our word for it. There are plenty of highly credentialed doctors, professionals, and whistleblowers speaking up at great personal cost and risk as well as plenty of research to be found if you just look for it.
- Parents must do their due diligence. You are the protector of your children. They rely solely on you to do what is in their best interests.
- Please consider the reality that our children are at virtually no risk of getting, transmitting or dying from Covid 19. These shots have **significant known short-term risks**. But, we don’t know the long-term consequences because there is **NO LONG-TERM SAFETY DATA!** They could be catastrophic! By definition, this makes it impossible to exercise informed consent under these conditions.

This administration, DHH, and the FDA are perfectly willing to mass vaccinate our children in order to ‘see what happens.’ By all measures that is a high risk, reckless and negligent attitude. Our children are quite literally being used as guinea pigs. We implore you to weigh all the costs and to ask questions.
